RESTOREID

restore

A Game About Making Smart Decisions for People and Nature

What is Restore?

Restore is a free, interactive game that lets you explore the challenges of restoring degraded landscapes—balancing sustainability, human needs, and ecosystem health.

Developed by the University of Stirling and Glitchers as part of the RESTOREID project.

Why Play:

Discover how restoration decisions impact the environment, community well-being, and even disease risks.

Navigate tough choices between tree planting, farming poultry, and fighting off nasty viruses.

Your in-game choices (with your consent) help researchers study how people engage with restoration concepts.

Shape tomorrow's landscapes one game at a time!
